Available as part of the RLM ERP System, this WMS modules has all the bells and whistles you need to run an effective, efficient, and accurate warehouse.

The system allows you to scan received goods from an inbound shipment, generate pick ticket documentation, scan barcoded pick tickets for packing purposes, scan pack goods into cartons, generate UCC128 labels, and integrate to small parcel routers like UPS and FedEx. The software also allows you to stay EDI compliant, with all business documents integrated within your shipping process.

Automatic Invoicing and Shipping Documentation

RLM WMS Express is totally integrated to your shipping, manifesting, invoicing, and EDI process. No need for double entry, the work done for packing and shipping in the warehouse automatically generates your invoices with freight charges, and any other add-on charges. If you have retailers requiring EDI, **RLM WMS Express** will automatically generate your EDI advance ship notices to your retailers, and send out your 810 EDI invoices to your retail trading partner.
